

1. Fantasy Hockey case

- a. Based on historical data simulate the number of points Ryan would get in the remaining matchups (13-20). Compute the total points.
- b. Based on the last two years data (exhibit 3) and your simulation in a, find the probability that Ryan would make it to playoffs in 2018-19.
- c. Perform a sensitivity analysis of a and b by varying your assumptions and trying different scenarios.
- d. Summarize your analysis in the form of key recommendations to Ryan.

Please submit one pdf file and notebook file per team through Canvas. Your pdf file should contain the solution and observations (if any). Please do not e-mail me your submission. E-mail submissions will not be accepted.
